AB Creatine pyruvates of general formula (creatine)x(pyruvate)y(H<sub>2</sub>O)n (x = 1-100, y = 1-10, n = 0-10) are produced by simple reaction of creatine with pyruvic acid. Creatine pyruvates can be used to increase stamina

and

strength in sports, for wt. and body fat redn. in health care, in the treatment of oxygen deficiency conditions (ischemia), obesity and overweight, as a food supplement, and as a radical scavenger.

 AB Topical treatment of houseflies with sublethal doses of DDT (I) [50-29-3] increased the metab. of glycogen, glucose [50-99-7], fructose 1,6-diphosphate, and ribose, and glucose 6-phosphate dehydrogenase [9001-40-5] and 6-phosphogluconate dehydrogenase activity in hyaloplasm from a I-resistant strain, but not in the hyaloplasm from a I-sensitive strain. The doses used were 100 .mu.gI/individual for the resistant strain and 0.5 .mu.g/individual for sensitive flies. In another exp., addn. of ATP (II) [56-65-5] to the hyaloplasm. Of the sensitive housefly strain intensified metab. of exogenous and endogenous glucose, while phosphate [14265-44-2] intensified accumulation of lactic acid [50-21-5]. Pyruvate [127-17-3] and a pyruvate-creatine mixt. [55965-97-4] stimulated fructose 1,6-diphosphate metab. and lactic acid accumulation.
